Investor Presentation APRIL 2014

Cautionary Notes

This presentation includes certain "Forward-Looking Statements" as that term is used in applicable securities law. All statements included herein, other than statements of historical fact, including, without limitation, statements regarding potential mineralization and resources, exploration results, and future plans and objectives of Oceanic Iron Ore Corp. ("Oceanic", or the "Company"), are forward-looking statements that involve various risks and uncertainties. In certain cases, forward-looking statements can be identified by the use of words such as "plans", "expects" or "does not expect", "scheduled", "believes", or variations of such words and phrases or statements that certain actions, events or results "potentially", "may", "could", "would", "might" or "will" be taken, occur or be achieved. There can be no assurance that such statements will prove to be accurate, and actual results could differ materially from those expressed or implied by such statements. Forward-looking statements are based on certain assumptions that management believes are reasonable at the time they are made. In making the forward-looking statements in this presentation, the Company has applied several material assumptions, including, but not limited to, the assumption that: (1) there being no significant disruptions affecting operations, whether due to labour/supply disruptions, damage to equipment or otherwise; (2) permitting, development, expansion and power supply proceeding on a basis consistent with the Company's current expectations; (3) certain price assumptions for iron ore; (4) prices for availability of natural gas, fuel oil, electricity, parts and equipment and other key supplies remaining consistent with current levels; (5) the accuracy of current mineral resource estimates on the Company's property; and (6) labour and material costs increasing on a basis consistent with the Company's current expectations. Important factors that could cause actual results to differ materially from the Company's expectations are disclosed under the heading "Risks and Uncertainties " in the Company's MD&A filed February 26th, 2014 (a copy of which is publicly available on SEDAR at www.sedar.com under the Company's profile) and elsewhere in documents filed from time to time, including MD&A, with the TSX Venture Exchange and other regulatory authorities. Such factors include, among others, risks related to the ability of the Company to obtain necessary financing and adequate insurance; the economy generally; fluctuations in the currency markets; fluctuations in the spot and forward price of iron ore or certain other commodities (e.g., diesel fuel and electricity); changes in interest rates; disruption to the credit markets and delays in obtaining financing; the possibility of cost overruns or unanticipated expenses; employee relations. Accordingly, readers are advised not to place undue reliance on Forward-Looking Statements. Except as required under applicable securities legislation, the Company undertakes no obligation to publicly update or revise Forward-Looking Statements, whether as a result of new information, future events or otherwise.

Eddy Canova, P.Geo., OGQ (403), the Director of Exploration for the Company and a Qualified Person as defined by NI 43-101, has reviewed and is responsible for the technical information contained in this presentation.

Corporate Overview

Listings		Capitalization Summary (April 1st, 2014)

Company Overview

- Iron ore development in the Labrador Trough (Québec)
- Led by a highly experienced management team that has managed, operated developed and/or sold over \$20 bn in assets
- 100% owned Ungava Bay projects Hopes Advance, Morgan Lake, Roberts Lake
- Largest single concession holder in Québec focusing on iron ore – 3,703 mining titles over 1,568 km²
- Currently advancing Hopes Advance project through Feasibility Study
- Important next catalyst is the identification of a strategic partner to develop Hopes Advance

HOPES ADVANCE PROJECT - A World Class Iron Ore Project

Hopes Advance 66.5% Fe Pellets

- World Class Iron Ore Reserves
- Lowest Quartile Costs
- Best in Class Management
- Superior Quality Product

Iron Ore Carrier

Hopes Advance – The Premier Low Cost Iron Ore Project in North America

Robust Pre- Feasibility Study* Economics	 Base case pre-tax NPV of \$5.6bn and unlevered IRR of 20.5% Life of mine operating cost \$30/tonne, potential to become one of the world's lowest operating cost iron ore producers
Compelling Infrastructure Advantage	 Located on the coast, no rail infrastructure – significant capex and opex savings Independence and self-reliance over development of power and port infrastructure and implementation of project schedule
Large Scale Deposit	 Scale – 1.36 bn Proven and Probable Reserves** Low mining costs with strip ratio of 0.5:1 in years 1 to 15
Straightforward Metallurgy	 High weight and iron recoveries with simple flowsheet Extensive bench scale and pilot plant testing suggest high quality product with 4.5% silica, very low other impurities and 66.5% iron grade
Strategic Partner Appeal	 LOI's in place with Québec government and Inuit Community Increasing desire by countries like China to invest directly in high quality iron ore projects in safe jurisdictions to reduce their reliance on the Big 3 Low costs and "no rail" infrastructure advantage combined with scale and a high quality product are unique and desirable qualities that have wide appeal amongst steel companies globally

* See slide 7

** See slide 12

Hopes Advance Pre-Feasibility Highlights (September 2012)

Variable	Highlights
FOB Price	\$100/tonne
LOM operating cost	\$30.18/tonne
Pre-tax NPV (8%)	\$5.6bn
Post-Tax NPV (8%)	\$3.2 bn
Pre-tax IRR (levered)	23.2%
Post-tax IRR (levered)	19.2%
Initial Capital Cost	\$2.85 bn
Expansion Capital Cost	\$1.61 bn
Strip Ratio Years 1 - 15	0.57
Strip Ratio LOM	1.17

- Sales price assumption of \$100/tonne at Port
- Assumes USD:CAD = 1:1 At \$1.10 Pre-tax/ Post-tax : NPV = \$6.9 bn/ \$4.0 bn IRR= 26.5%/22.0%
- Lowest quartile operating cost of \$30.18/tonne
- Construction commencing 2015
- Phase 1 production of 10 million tpa 2018 - 2027
- Expansion to 20 million tpa production from 2028
- Expected mine life of 31 years

Significant Progress to Date

Achievement	Completion
Property acquired and private placement financing \$20 million	December 2010
Commenced field program for Hopes Advance resource evaluation	March 2011
LOI signed with Inuit community	August 2011
Initial NI 43-101 Resource Estimate and PEA for Hopes Advance	November 2011
 Updated Resource Estimate Completed metallurgical test work on approximately 630 composite samples 	April 2012
 Pilot plant testwork and flowsheet development Pre-Feasibility Study in respect of Hopes Advance Proven and probable mineral reserves* 	September 2012
Completed Private Placement Financing to Raise \$3.5 Million	October 2012
Product Value in Use Marketing Study completed	April 2013
 Engaged Capital Asia as strategic advisor and completed \$3 million financing with Sino-Canada Natural Resources Fund 	May 2013
Product optimization study completed	June 2013
 LOI received from the Ministry of Finance and Economy of the Québec Government for Investment in Hopes Advance Project 	July 2013
Shipping Optimization Study completed	September 2013

•

Management Committed to 2014 Becoming a Year of Transformational Progress

Exploring near term options to advance additional work:

- Committed to completion of a Feasibility Study this year
- Completion of environmental baseline work and submission of Environmental Impact Statement
- Criteria:
 - Must strengthen the Company's future negotiating position on the Strategic Partner initiative
 - Limit dilution to existing shareholders
- Strategic Partner initiative showing good progress:
 - Non-disclosure Agreement in place
 - Due diligence progressing well
 - Strategic alliance with CapitalAsia delivering very encouraging results

•

China Based Strategic Partner Experience

- Sustained direct investment by major steel producers in China into high quality foreign iron ore projects driven by:
 - Declining domestic production
 - Positive long term growth outlook across the steel sector
 - High costs for raw material imports from "Big 3" producers
- National Development and Reform Commission encouraging additional direct foreign investment
- 2013 a transition year
 - New Central Government leadership
 - State Owned Enterprises took a cautious approach to ensure alignment
- Due diligence undertaken in respect of SOE investments increasingly detailed
 - Only the best projects will make the cut (large scale reserves, high quality product, and low operating costs)
 - Geography matters and Canada bodes well (growing uncertainty with Africa, Australia and South America)

Next Steps

Development Activity	Target Completion Date
Strategic Partnering & Financing	2014
Completion of Environmental Impact Study	2014
Negotiate impact benefits agreement with local stakeholders	2014
Feasibility Study	2014
Project Construction	2015 / 17
Production	2018 - 2048

Hopes Advance Mineral Reserve

MINERAL RESERVES (25% Fe cut-off)

Category	Tonnes	Total Fe (%)	Weight Recovery (%)		
Proven Reserves	763,276,000	32.3%	37.4%		
Probable Reserves	595,990,000	32.1%	37.1%		
Proven and Probable Reserves 1,359,266,000		32.2%	37.3%		

Disclosure:

- Open pit reserves are based on a 25% Fe cut off grade
- Reserves calculated based on industry standard pit optimization techniques guiding detailed pit designs including ramps and surface constraints. The mineral reserve is contained within the mineral resource. The effective date of the mineral reserve estimate is September 19, 2012
- Excludes inferred resources of approximately 72.7 million tonnes of 32.8% Fe. Mineral resources that are not mineral reserves do not have demonstrated economic viability.
- There are no known legal, political, environmental or other risks that could materially affect the potential development of the mineral reserve.

Hopes Advance Images

Castle Mountain

Zone 2

Hopes Advance Metallurgy

Bench – Scale Testwork April 2012	 600 samples across all deposits at Hopes Advance Demonstrated high weight recoveries with high percentage of iron recovery from gravity process Simple process flow sheet with high grade 66.5% concentrate Very low levels of deleterious materials, ≤4.5% Silica
Pilot Plant Testwork and Flowsheet Development September 2012	 Based on 10 tonne and 250 tonne composite samples from Hopes Advance Simple flowsheet
Attributes	 Minus 300 micron (minus 50 mesh) coarse grind liberates 87% of Fe units Remaining 13% upgraded through fine grind and magnetic separation Low processing cost, results from low grind and low power requirements

Hopes Advance Flowsheet – Simple Metallurgy

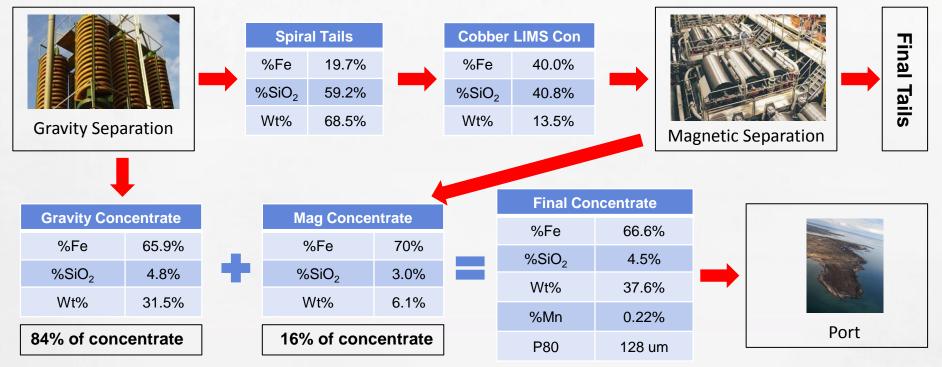

Gyratory Crusher

Primary Grinding				
%Fe	34.2%			
%SiO ₂	42.1%			
Wt%	100%			
Grind	300um			

 High weight and Fe recoveries using a simple flowsheet

Note: Based on Pilot Plant scale testwork in respect of the Castle Mountain deposit which supports at least the first 15 years of production

Excellent Product Chemistry

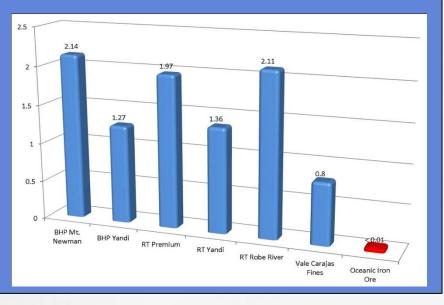

Major Elements (%)*

Fe	S	O ₂ Mg(g0	Ca0		Al ₂ 0 ₃		Na		K	
66.6%	6 4	4.5% (1%	% 0.4%		<0.01% <0.		01% <0).01%	
	Mn	Ti		С	r	\	/	P		S		
	0.22%	22% <0.01%		<0.0)1% <0.0)1%	<0.0)1%	0.03	%	

- Combined concentrate includes 64% hematite and 30% magnetite
- Ratio of hematite to magnetite is 2.1 : 1

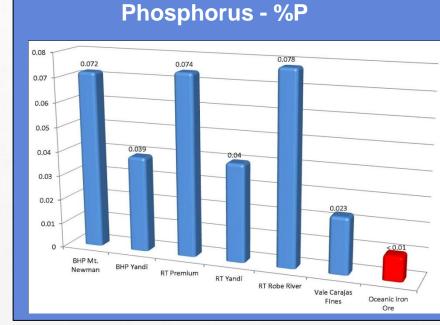

High Quality Product

Alumina - %AlO₂O₃

Source: Alderon Iron Ore, Sept 2012

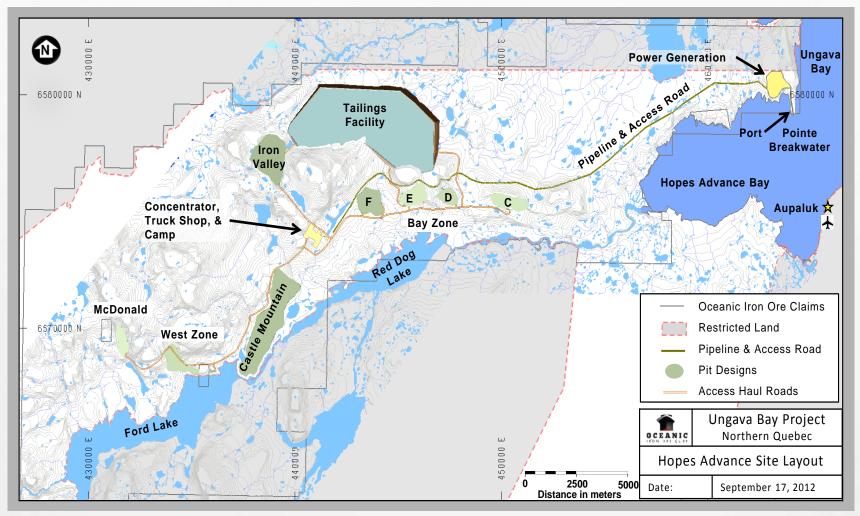

Source: Alderon Iron Ore, Sept 2012

- High quality product with amongst the lowest alumina and phos content
- Positive impact on blast furnace performance and overall operating and capital costs

Hopes Advance Site Layout

• No rail requirement

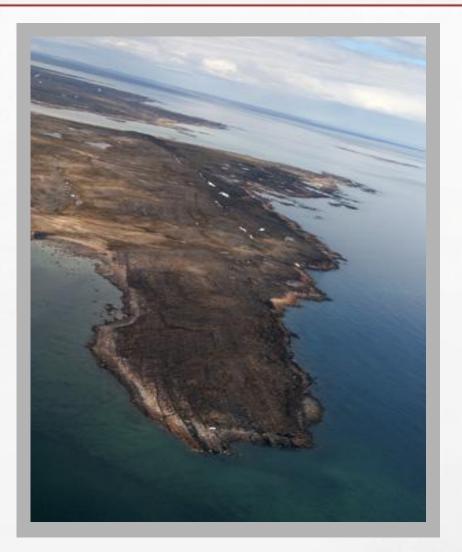

•

Port & Shipping Logistics

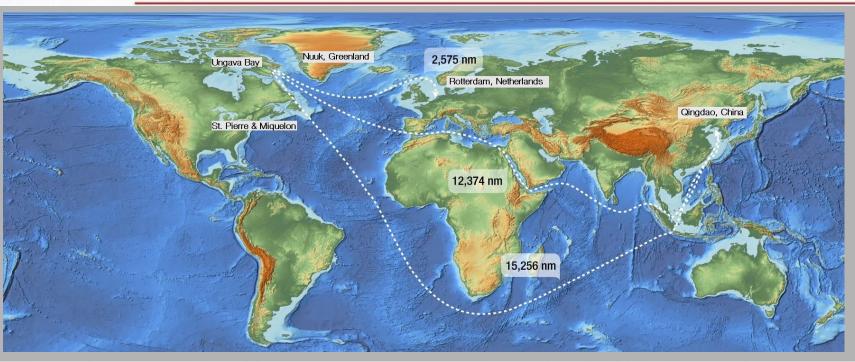

- September 2013 results of Shipping Optimization Study led by AMEC
 - Includes input from shipping & transshipment companies as well as port authorities:
 - Fednav Limited
 - Canada Steamship Lines
 - Europees Massagoed
 Overslagbedtijf
 - Shipping strategy is technically feasible
 - Direct shipments during ice free months
 - Transshipment during winter months
 - CFR Cash Costs under \$65/tonne (including shipping) to the port of Qingdao China
 - Ports considered: Nuuk, Rotterdam & St.
 Pierre & Miquelon

Pointe Breakwater Port Site

Viable Year-Round Shipping Routes

- Hopes Advance Bay is located at the midpoint between Deception Bay to the NW and Voisey's Bay to the SE
- Proven shipping technology: Glencore Xstrata, Vale, and soon Canadian Royalties all shipping 12 months per year with two of three operations located further north than Hopes Advance

Thomas Paterson, Senior Vice President of Arctic Shipping Company Fednav:

"Our extensive experience operating in the Canadian Arctic allows us to conclude that shipping from the Hopes Advance project can be accomplished year round. Fednav looks forward to following up our budget estimate provided for this Study by submitting a competitive proposal for Oceanic's Hopes Advance project at a future date and would be pleased to participate in satisfying the project's long term shipping needs."

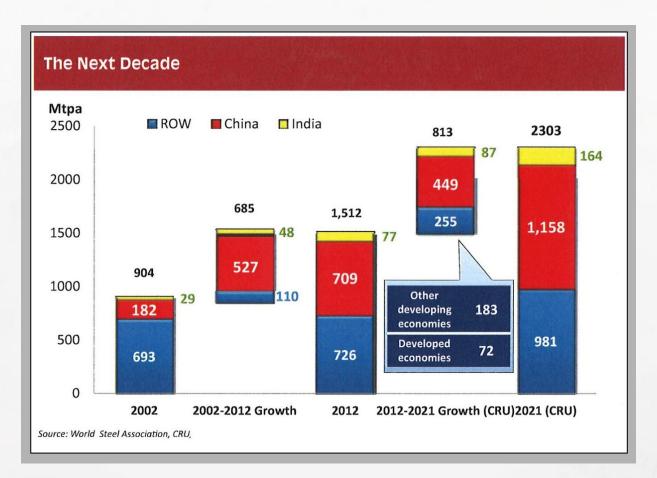

Social and Environmental Considerations

- A corporate philosophy and priority
 - Clear communication and buy-in required from employees, consultants and contractors
- Early stakeholder and government interaction
 - LOI agreed with Inuit community
- Focus on addressing the needs of local people while also respecting the culture and environment
- Set a standard against which future projects across the industry are measured

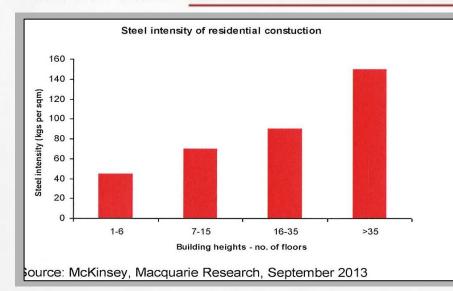

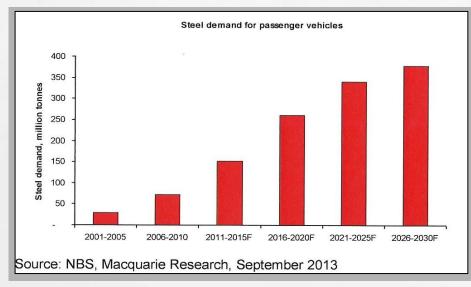

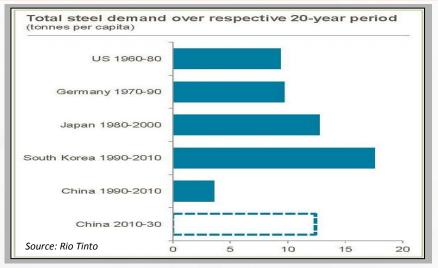

- China will lead, however India and growth in other geographic regions also contributors
- Growth in global construction sector projected at +70% by 2025
- Economic iron ore resources in China declining with 40% of China's capacity deemed uneconomic by 2018

China Steel Demand Robust & Growing Over Medium - Long Term

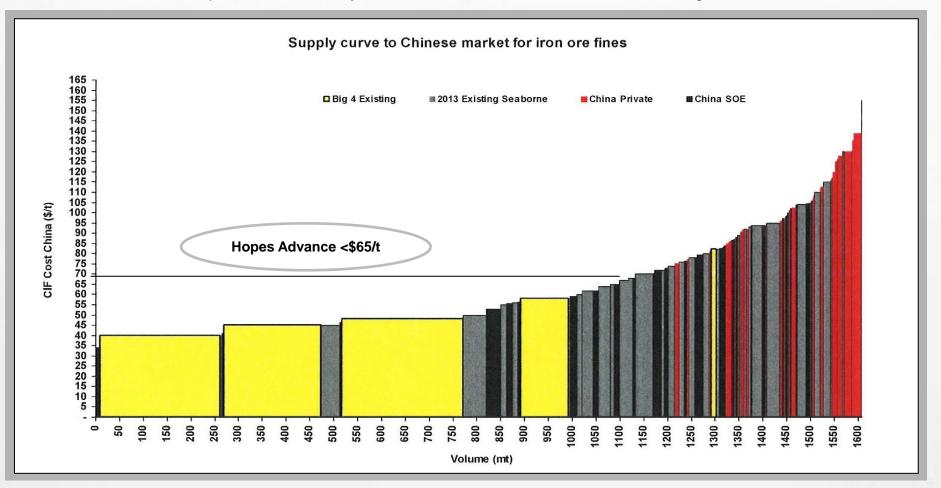

- Urbanization to continue
- Steel intensity increases as buildings get higher
- China's cumulative steel consumption per capita remains well behind developed world
- This is despite substantial growth over the last decade
- Crude steel production in China expected to peak towards 2030
- New and replacement consumption will drive future growth focused in automotive, machinery and "white" products such as appliances, air conditioners, etc.

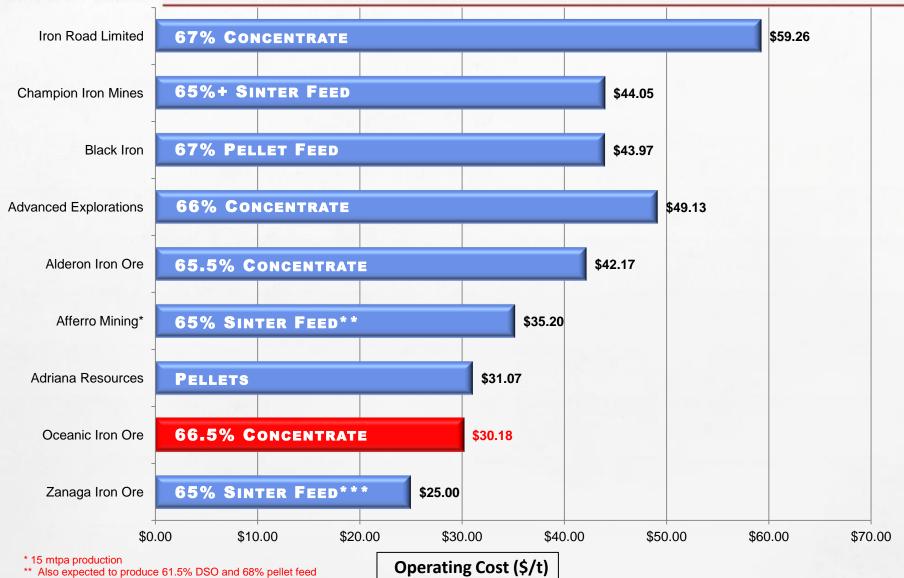

Supply Cost CIF China

"The National Development and Reform Commission on February 3, 2014 said Chinese steelmakers should keep building up stakes in global iron-ore assets in the interests of China's strategic security and "speaking rights," or influence, in global trade. China's ore imports rose 10% last year to a record 819 million metric tons, according to customs data"

Low Operating Cost Relative to Peers

*** Also expected to produce 67% concentrate

OCEANIC

IRON

ORE CORP

Hopes Advance – The Premier Iron Ore Development Project

- Exceptional large scale resource in low risk jurisdiction
- Low cost producer: \$30/tonne life of mine
- High grade (66.5%) premium iron concentrate for seaborne market
- Fast track development schedule independent of 3rd party infrastructure and government funding

"The cash costs estimates are low relative to Canadian peers and reflect the low 1.17:1 strip ratio at Hopes Advance, particularly in the earlier years (0.57:1 in years 1 to 15) and the proximity of the deposit and infrastructure to the targeted port site. Oceanic plans to utilize a 26km pipeline to slurry iron ore concentrate from the mill to the planned port site on Ungava Bay. The short distance to tidewater and no need for rail transportation have a significantly positive impact on operating costs compared to peers."

Daniel Greenspan, Macquarie Capital Markets Canada, July 2013

APPENDICES

Board of Directors

Steven Dean, Chairman, CEO and Director	 A Fellow of the Australian Institute of Mining and Metallurgy, a Member of the Canadian Institute of Mining, Metallurgy and Petroleum, and a Fellow of the Institute of Chartered Accountants of Australia. Extensive experience internationally in mining, most recently as President of Teck Cominco Limited (now Teck Resources Ltd.). Teck is a major diversified resource company and is the largest producer of metallurgical coal in North America and the No. 2 exporter of metallurgical coal in the world to the globe's steel manufacturers. A founding director of Normandy Poseidon Group, (which became Normandy Mining) Australia's largest gold producer until its sale to Newmont Mining in 2002, as well as founder of PacMin Mining which became a subsidiary of Teck Corporation in 1999. Also a co-founder and former chairman of Amerigo Resources Ltd.
Gregg Sedun , Founder and Director	 Director and/or founding shareholder in a number of successful companies including Diamond Fields Resources, Adastra Minerals Inc. and Peru Copper Inc. Currently President & CEO of venture capital company Global Vision Capital Corp., Formerly the Executive Chairman of Goldgroup Mining Inc. (TSX:GGA) and Chairman & Director of Uracan Resources (TSX.V:URC)
Gordon Keep , Director	 Extensive business experience in investment banking and creating public natural resource companies. Currently Executive Vice-President of Fiore Financial Corporation, a private boutique merchant banking firm Also serves as an officer and/or director for several natural resource companies
Hon. John Reynolds, P.C. Director	 Served as both an MLA in British Columbia from 1983 to 1991 and as a Member of Parliament in Ottawa, Ontario from 1972 to 1977 and then from 1997 to 2006 Currently a Member of the Queen's Privy Council for Canada and has been a Senior Strategic Advisor for the law firm McMillan (formerly Lang Michener LLP) since March 2006
Jean Martel , Director	 Currently a member of the Board of Directors of TMX Group Ltd. (TMX), the parent company of the Toronto Stock Exchange and TSX Venture Exchange, as well as the Business Development Bank of Canada (BDC) Chairs the Regulatory Oversight Committee of TMX, the Rules and Policies Committees of TSX, TSXV, MX and Alpha, the Governance and Nominating Committee of the BDC and the Independent Review Committee of the Québec Bar Investment Funds Past Assistant Deputy Minister of Finance for Québec and Deputy Minister responsible for the Financial Sector Since August 1999, Mr. Martel has been a partner at Lavery, a leading Québec full service law firm.

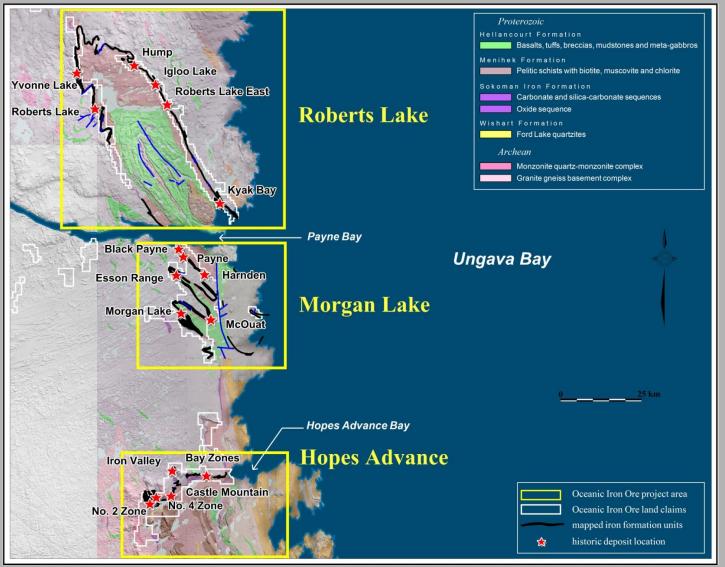

Management Team

Alan Gorman, President and COO	 Extensive experience operating in northern and arctic environments Previously Executive VP Operations for Goldbrook Ventures and of Jien Canada Mining Ltd's Nunavik Nickel Project, as well as Operations Manager for Baffinland Iron Mines Corp
Irfan Shariff, CFO and Corporate Secretary	 Consultant to a number of junior resource companies based in Vancouver, Canada 8 years as a corporate finance and mergers and acquisitions advisor at Citigroup in London, UK (2001-2008)
Eddy Canova, Director of Exploration	 Over 25 years experience in the mineral exploration industry in Canada, Venezuela, Mexico, and West Africa and 4 years experience in mineral production in Venezuela Past experience includes Gold Reserves Brisas's project, Bolivar'sTomi Gold Mine and Alexandria Minerals from 2002 to 2009
Rodney (Rod) Johnson Ph.D, VP Geometallurgy	 Served as chief geometallurgist and process mineralogist for Cliffs Natural Resources, Inc., chief geologist for Copper Range Company at the White Pine Mine, and senior exploration geologist and nickel commodity specialist for Western Mining Corporation Ph.D. in Geology from Michigan Technological University with specialty in the areas of metallic ore deposits, structural geology, low temperature aqueous geochemistry, and geohydrology
Stephen Roberts, VP Investor Relations	 Previously VP Investor Relations at Endeavour Mining 11 years with Credit Suisse and Bank of America as Senior US Equity salesman
John Hall, VP Shipping and Marine Services	 35 years experience in industrial bulk transportation, specializing in ports, shipping and trans-shipment Past experience includes consulting on port & marine logistics for Baffinland Iron Mines, Severstal, Alderon Iron Ore, Dominion Terminal Services, Nucor Steel, Teck Corp., and Coeclerici Formerly involved in management with Canada Steamship Lines, Jebsens Group, and Skaarup including President & CEO of Jebsens Canada

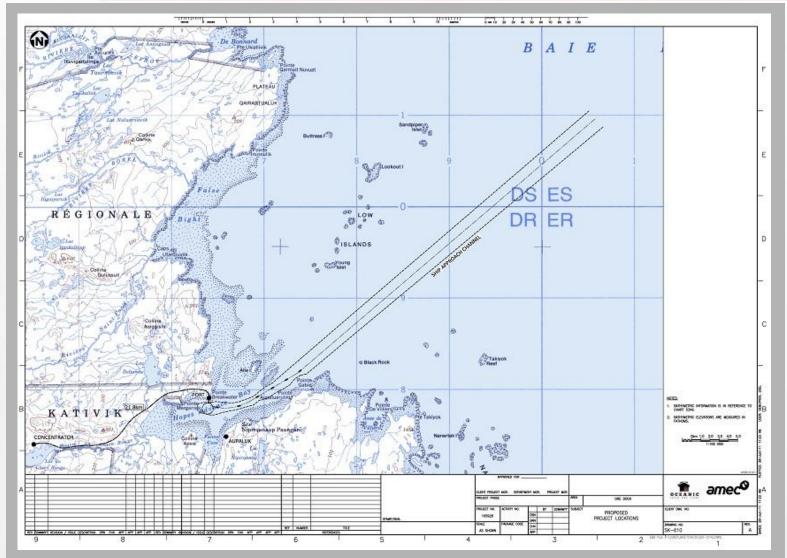

UNGAVA PROPERTY PROJECT AREAS 3,703 CLAIMS – 1,568 SQ.KM.

30

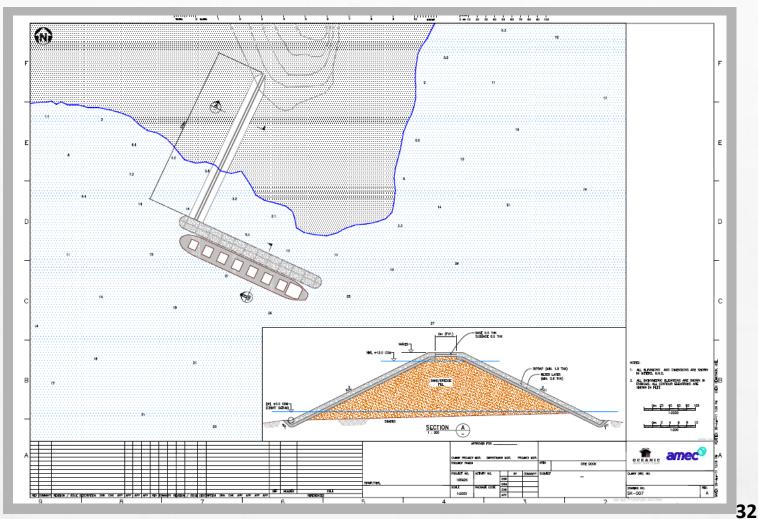

Conceptual Port Location

Conceptual Port Design

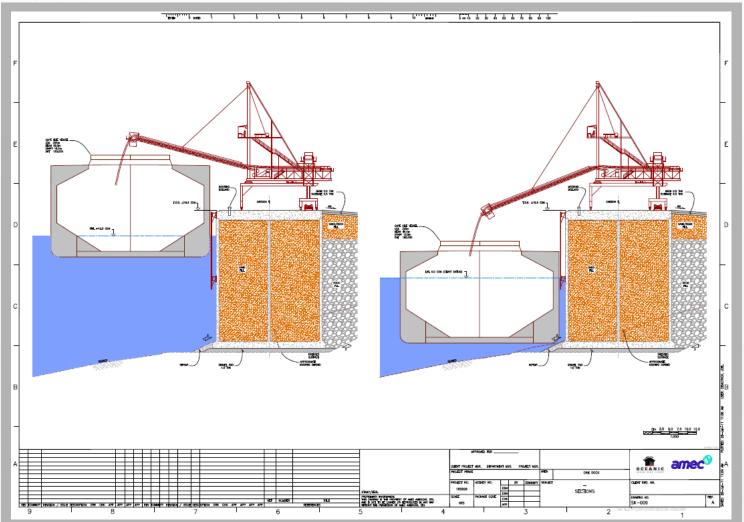

• Pointe Breakwater has natural attributes which make it an ideal potential location for a year round large tonnage vessel deepwater port

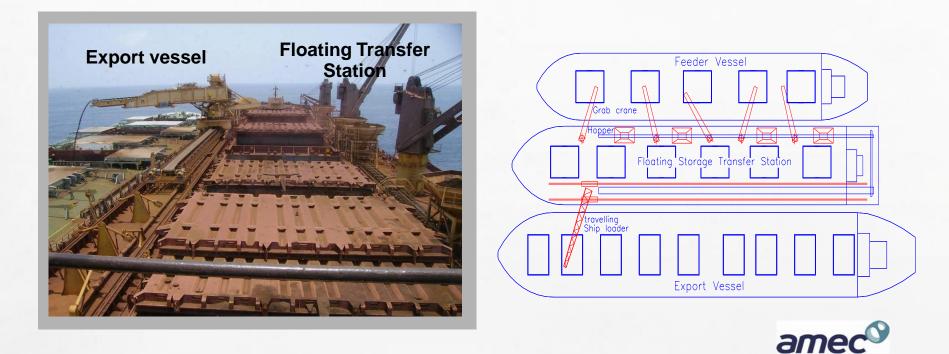

Conceptual Shiploader Design

• Shiploader will be engineered and constructed to accommodate the tides in Ungava Bay

Trans-shipment

• Floating transfer station with deck mounted equipment to transfer cargo from ice class vessels to export vessel

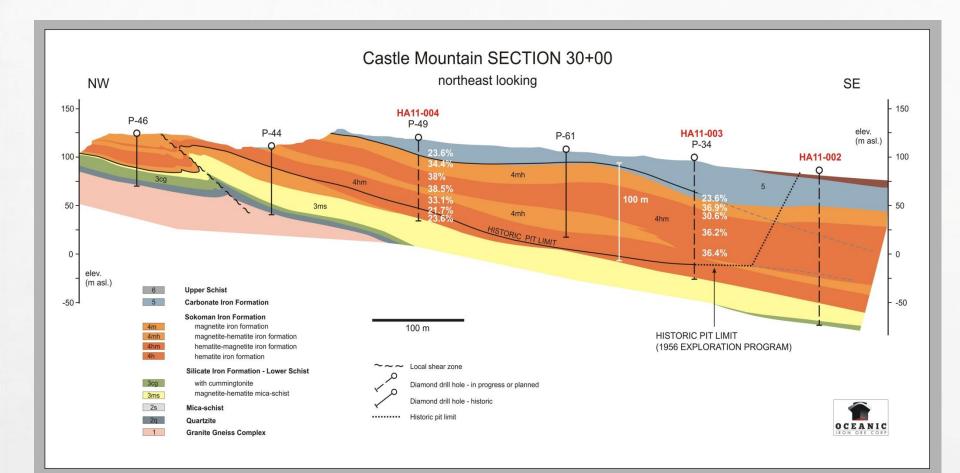

Ice Class Ship In Action

Section View of the Castle Mountain Grid

OCEANIC

Previous Work

- Labrador Trough noted for iron potential in 1895 by GSC
- First claims staked in Hopes Advance area in 1951
- 1950-1970 active exploration including sampling, trenching, drilling, metallurgical testwork
- Ungava Iron Ores Company completed most of the exploration in Hopes Advance area (1951-1962) including 12,935 m in 185 holes in 8 deposits. Scoping and pre-feasibility studies were completed
- International Iron Ores Limited exploration of the Roberts Lake area (1952-1957) including 5,115 m in 97 holes in 6 deposits
- Oceanic Iron Ores Company was active in the Morgan Lake area (1955-1957) and work included 3,611 m in 45 holes in 2 deposits

Roberts Lake – Historical Resource*

*These are historical resource estimates that do not comply with the current Canadian Institute of Mining, Metallurgy and Petroleum Resources (CIM) Definition Standards on Mineral Resources and Mineral Reserves as required by National Instrument 43-101 (NI 43-101) Standards of Disclosure for Mineral Projects. These historical resource estimates were described as "drill indicated" and "potential" at the time of reporting which does not correspond to the categorization set forth in sections 1.2 and 1.3 of NI 43-101. Although these historical resource estimates are relevant to support the presence of large areas of iron mineralization, these estimates are speculative, are based on very limited exploration drilling and will require extensive new exploration and metallurgical efforts to validate. They should not be treated as current mineral resources or reserves or relied upon until confirmed by current exploration and a Qualified Person. A Qualified Person has not done sufficient work to upgrade or classify these historical resource estimates as current NI-43-101 compliant mineral resources. The Roberts Lake historic resource was reported in 1970 from drilling in the late 1950s, the Morgan Lake historic resource was reported in 1957 and 1964, and the Hopes Advance historic resource was reported in 1958. Further information in respect of these historic resources is outlined in a 43-101 technical report prepared by Micon entitled "Technical Report on the Ungava Iron Property – Ungava Bay Region, Quebec, Canada dated Oct. 29, 2010, available on SEDAR.

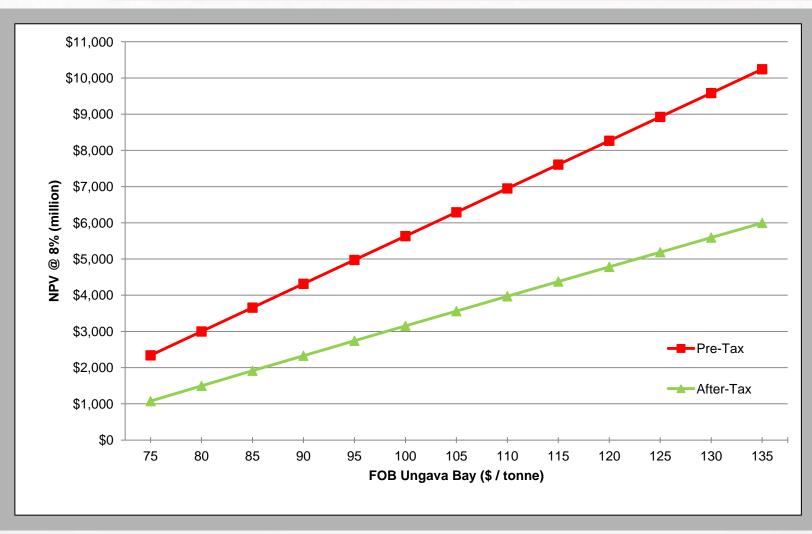

Morgan Lake – Historical Resource*

Deposit	Crude Resource (million metric tonnes)	Head Iron (Mag. Fe)	Exploration Drillholes	Metres Drilled	Source	Date
